

United States Senate

WASHINGTON, DC 20510-3205

[[DATE]]

The Honorable Lisa Murkowski
Chair
Appropriations Subcommittee on Interior,
Environment & Related Agencies
Washington, DC 20510

The Honorable Jeff Merkley
Ranking Member
Appropriations Subcommittee on Interior,
Environment & Related Agencies
Washington, DC 20510

Dear Chair Murkowski and Ranking Member Merkley,

We greatly appreciate the consistent support you have provided for the National Environmental Education Act (NEEA). These funds are being wisely invested in addressing and understanding the major environmental issues confronting our communities, including clean air and safe drinking water.

We ask that you continue funding this successful program pursuant to the formula prescribed by the NEEA at the authorized level of \$14 million in the FY 2026 appropriations bill.

- NEEA programs are essential to educating millions of Americans, including students, with the science-based information they require to understand and take actions to address climate impacts, including drought, wildfires, sea level rise and extreme weather events that are affecting communities across the nation.
- In addition to traditional regulatory authorities, EPA's toolbox includes non-regulatory approaches built around engaging and educating the public and private sector. The value of this education to establish durable policy and to enhance public understanding of how to address climate change impacts and other pressing environmental issues cannot be overstated. This is particularly true for communities of color that are disproportionately affected by the impacts of climate change.
- Fact-based environmental education and engagement for all communities—especially when complementing, aligning with, reinforcing, or anticipating regulatory authority—can accelerate progress.
- Environmental education spurs action to create healthy, livable communities that are more resilient to climate impacts, and that attract jobs for all Americans, including underserved and underrepresented communities.

- Since 1990, NEEA has been a highly effective, non-regulatory tool for improving student performance in science and math and protecting public health.
- Congress has consistently funded this program, which has been strongly supported by local communities, public health officials, educators, and industry.
- NEEA helps build 21st century skills and promote job training, innovation, and leadership skills.
- The Act utilizes public-private partnerships to highly leverage scarce federal resources.

Programs funded through this Act have far-reaching and well-documented positive impacts. They enable citizens from all walks to make informed, scientifically sound decisions regarding energy consumption, water quality and conservation, and energy efficiency at homes, schools, and the workplace. They extend environmental education and engagement opportunities by reducing barriers and welcoming people of all identities and differences to experience and learn about the environment in ways that improve their lives and the health of the planet. These programs provide practical applications for math, science, technology, and engineering. Research indicates that this type of education increases critical thinking and the problem-solving skills necessary to foster innovation and keep America competitive in a fiercely global economy.

With support from the NEEA, the National Environmental Education Foundation (NEEF) has partnered with more than 20 companies, including Toyota, International Paper, 3M, and Samsung to create nationwide conservation events that generate millions of dollars in volunteer work—\$12 million in FY24 alone. NEEF partners with sports leagues such as the NHL to prompt fans and audiences to take actions at home that result in a cleaner and safer environment, and has trained over 20,000 healthcare professionals to address the environmental triggers of pediatric asthma.

The North American Association for Environmental Education (NAAEE) helps ensure that by the time students graduate high school they are equipped with the knowledge to address pressing social, economic, and environmental challenges, including those posed by climate change. Project Learning Tree (PLT), a program of the Sustainable Forestry Initiative, engages students in learning about trees, forests, and sustainable forest management.

NEEA grants have been awarded in all 50 states totaling more than 4,000 grants that support high quality, high impact educational programs that address local priorities and needs. They are effective because they allow students to apply science in a real-world context and perform better on standardized tests in reading, math, writing, social studies, and science. This helps America close the education gap with other countries.

Thank you again for your continued support and for your consideration of our request to fund NEEA programs at the authorized amount of \$14 million for Fiscal Year 2026.

[[CLOSING]]

Commented [M(1): please figure out whether to capitalize the "a" in "act" (or change it to NEEA) - here you have act lower case, while in the bullet above you have it in uppercase
